Jerseyland — Best Variety in its Season

LIBRARY
RECEIVED
SEP 25 1961
U.S. Department of Agriculture

Offered by

THE NEW JERSEY PEACH COUNCIL, INC.

FALL, 1961 - - - SPRING, 1962

EARLY PEACH VARIETIES

COLLINS (N. J. 200)

A firm, attractive, high quality, yellow-fleshed peach of medium size ripening a few days before Sunrise. A semi-cling when picked at maximum shipping condition. It is a freestone when fully matured. It has developed practically no fruit with split pits. It is one of the most productive early varieties ever developed at the New Jersey Agricultural Experiment Station. It is an ideal variety to start the New Jersey peach season. Chemical thinning is recommended to insure good size.

SUNRISE (N. J. 133)

An attractive, yellow-fleshed peach of medium size ripening a few days after Collins. It is firm and almost a freestone when ripe. Split pits ripen with Collins.

JERSEYLAND (N. J. 135)

This large, firm, attractive yellow-fleshed freestone ripens ten days before Triogem. It is productive, hangs well to the tree, and is an excellent shipper. It has been one of the most profitable early varieties in New Jersey for over 10 years. There is no better variety at this season.

GOLDGEM (N. J. 197)

A large, yellow-fleshed peach that ripens at the same time as Red Haven. It is firm and attractive, resembling Newday in that respect. It is recommended as a variety for harvesting and marketing between Jerseyland and Triogem.

TRIOGEM (N. J. 70)

A firm, yellow-fleshed freestone of high quality, ripening a few days later than Goldgem. Very attractive and a good shipper. Triogem is one of the finest all around varieties to come out of the N. J. Agr. Exp. Station.

NEWDAY (N. J. 79)

A firm, bright, attractive, yellow-fleshed peach of good quality, ripening with Triogem. It is easier to grow than Triogem in that it sizes a little better without so much thinning.

SUNHIGH (N. J. 82)

A large, firm, attractive, yellow-fleshed variety of excellent dessert quality ripening a few days after Triogem and Newday. A very popular commercial variety throughout all peach areas.

SUMMERQUEEN (N. J. 157)

A large, attractive, firm, yellow-fleshed peach of excellent quality ripening about with Sunhigh or just before Goldeneast. It appears to be less susceptible to bacterial spot than Sunhigh. It has large, showy blossoms, generally the trees set more fruit buds than Sunhigh, but it requires cross pollination.

MID-SEASON VARIETIES

GOLDENEAST (N. J. 87)

A large, firm, attractive, yellow-fleshed freestone of high quality ripening about two weeks before Elberta. The trees are strong growers and should not be fertilized too heavily.

ORDER BLANK

Date....., 19

To THE NEW JERSEY PEACH COUNCIL, INC.
R. D. No. 3, Princeton, New Jersey:

I would like to place an order for the following trees:

VARIETY	*No. Trees*	*Grade Preferred*	*VARIETY*	*No. Trees*	*Grade Preferred*

Make checks and money orders payable to the New Jersey Peach Council, Inc.

M. A. BLAKE (N. J. 117)

A firm, bright, yellow-fleshed freestone of good quality. The harvesting season starts about one week before Elberta, and continues well into the Elberta season. The fruit remains firm and hangs to the tree after it becomes highly colored. It is rapidly replacing Elberta in many New Jersey orchards, because of the strong demand for it on the market. An excellent variety for home canning.

AFTER ELBERTA

CONSTITUTION (N. J. 161)

A large, yellow-fleshed, freestone of high quality ripening a week to ten days after Elberta.

NECTARINES

NECTAROSE (N. J. 9)

A large, white-fleshed freestone, ripening just before Garden State, or about with the Sunhigh peach.

GARDEN STATE

A large, firm, yellow-fleshed freestone of high quality ripening with the Goldeneast peach. It is very desirable for slicing, canning, and freezing.

NECTAHEART (N. J. 10)

A large, white-fleshed freestone completely shaded with red, ripening immediately after Garden State.

NECTACREST (N. J. 8)

This large, attractive, white-fleshed freestone, usually ripens with the Summercrest peach at New Brunswick or about one week after Nectaheart.

NECTALATE (N. J. 4)

A large, firm, white-fleshed nectarine ripening after Elberta, or about with the Afterglow peach.

PLEASE NOTE

Varieties discontinued by the New Jersey Peach Council and not appearing in this catalogue are available at the C. H. Steelman Nursery. These include, Cherryred, Earlyeast, Raritan Rose, Wildrose, Summerrose, Summercrest, White Hale, Afterglow, Laterose, Fallate, Autumn and Frostqueen.

All varieties listed originated at the New Jersey Agricultural Experiment Station and have been tested in commercial orchards. The trees have been propagated in New Jersey for sale and distribution under the direction of the Peach Council.

For additional information regarding these varieties contact the New Jersey Peach Council at New Brunswick, P.O. Box 231—Telephone CHarter 7-1766, Extension 7-420, or at Princeton, R. D. 3, Telephone WAlnut 4-2525.

Trees may be secured at the C. H. Steelman Fruit Nursery on the Clarksville-Port Mercer Road, about one-quarter mile from State Highway Route 1. Telephone WAlnut 4-2525. Small shipments to distant points, including all orders for less than 25 trees, will be sent by express collect unless otherwise specified on the order blank.

PLACING ORDERS

All orders for trees should be sent to the New Jersey Peach Council, Inc., R. D. No. 3, Princeton, New Jersey. Orders for Fall delivery will receive first consideration.

A deposit equal to 10 per cent of the total cost of the trees is required with each order and the balance before delivery.
